Troubleshooting

“ Help! Whenever I try to run `!gsheet` or `!update` I get some weird string about `Error loading character: Unexpected input on line 1, col 6: expected DECIMAL, D, INTEGER, LPAR, _WS, U_OP`

9/10 times this occurs because you have messed up the formatting on one of the cells. Compare to another sheet in `#character-sheet-checking` and make sure the format is very similar. Common culprits include how you formatted weapon attack damage (separate damage from type with space, not a slash) and how you fill in your spells (do not fill the second sheet for spells and attacks unless you have to).
